Journal

WB, Everwood - 24 frame video playback

CBS Touched By an Angel (9 seasons)

24 frame Video playback

I have a passion for designing workflows and systems for the exacting needs of production.

LUCASFILM / DISNEY + Working in conjunction with Cogswell Video Services I designed and implemented real time streaming and unit sync of files as well as designing and installing a robust IT infrastructure on the backlot for Streaming and sending files immediately to POST and VFX.

AVATAR - Installed and configured Qtake Server that allowed Jim Cameron to have instant access to material that was recorded on multiple stages and locations on different Qtake operator stations.

AVATAR - Designed and implemented the world's first 4K 3D high framerate video assist systems for The Way Of Water.

NBA - Engineer in charge of the VR broadcast from the NBA "Bubble" in Atlanta for Facebook Oculus Venue.

NBC/Universal - Designed a system that allowed 1st and 2nd units Video Assist recordings to be instantly available to Post production minutes after being shot on Film Cameras. This gave post a jump start on editing footage days before the film transfer dailies were available from the lab.

TED TV- NBC Universal Designed a system that allowed for simultaneous recording of 3 video assist feeds as well as 3 composite Video feeds from the Simultaneous Viewing technology implemented. I helped make this work in a very crowded RF environment where multiple RF systems were deployed and for critical systems.
